

1) Once I am finished with writing the code for my current story I will assign it to you for testing.

2) Instead of waiting until you are finished, let's pair on writing the unit tests.

This will ensure that we are collaborating on delivering the complete feature for the sprint. Rather than just you writing code and me testing.

Developer

QA

3) Cool, that makes sense.

With that basic foundation, you can further elaborate the test cases and create more automation tests.

That will help us make future changes faster and reduce introducing new bugs.

4) To make our future work clearer we should meet with our Product Owner together.

This will allow us to collaborate on writing the stories and acceptance testing. We can also be clear on our "definition of done".

5) I agree, this will help us emphasize our conversations around quality and "done" over tools and process.
