

Team Lead

Product Owner

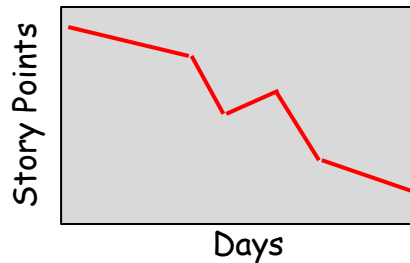

1) Each day of the sprint we should be reviewing our sprint burndown.

Our goal is for all the committed story points to be completed by the end of the sprint.

2) I agree, we want to understand if the team is accurately estimating story points.

In addition, if new work is being added to a in-progress sprint which may impact the completing of planned sprint work.

Sprint Burndown

3) Yes, there are a several specific anti-patterns that we should be watching for:

- The team finishes early sprint after sprint because they aren't committing to enough work.
- The team misses their forecast sprint after sprint because they're committing to too much work.
- The burndown line makes steep drops rather than a more gradual burndown because the work hasn't been broken down into granular pieces.
- Scope is changed mid-sprint.

4) This data will help us to improve our sprint performance by highlighting potential problems.

*Metrics do not tell the full story, but they give us an idea of where to start for making improvements.*
